Patient information – external disease and corneal services

Corneal transplantation: deep anterior lamellar keratoplasty (DALK)

Why do you need a corneal transplant?
The cornea is a window of transparent tissue at the front of the eyeball. It allows light to pass into the eye and provides focus so that images can be seen. Various diseases or injury can make the cornea either cloudy or out of shape. This prevents the normal passage of light and affects vision.

The cornea has three layers (thin outer and inner layers and a thick middle layer). In some diseases, only the middle layer or part of the middle layer is affected (see below).
DALK is a modern technique whereby the outer two layers of the cornea are removed and replaced with the outer two layers from a donor cornea to give a partial-thickness transplant.

**Benefits of deep anterior lamellar keratoplasty (DALK)**

**Improved vision**
Approximately 75% of transplant recipients for keratoconus have vision sufficient to drive legally, although they may need glasses or contact lenses or sometimes further surgery for best results. It can take up to 18 months until the full improvement in vision is appreciated.

**Risks of deep anterior lamellar keratoplasty (DALK)**

**Rare but serious complications**
- Sight-threatening infection (1 in 1,000)
- Severe haemorrhage causing loss of vision
- Retinal detachment
- Severe inflammation or other rare causes of loss of vision

**Corneal transplant rejection**
A corneal transplant can be identified and attacked by your immune system. This happens in one in six patients in the first two years after transplantation and can cause graft failure. It can often be reversed if anti-rejection medication is started promptly. Rejection remains a possibility for your lifetime.

**Graft failure**
When a graft fails, your cornea becomes cloudy again and your vision becomes blurred.

**Glaucma**
This can usually be controlled by eye drops, but occasionally requires surgery and can damage your sight.

**Cataract**
This can be removed surgically.
Conversion to penetrating keratoplasty
Occasionally, it is not possible to perform a partial thickness transplant and a full-thickness transplant must be performed instead. This happens in 10% of intended DALK procedures.

Possible advantages of DALK over full-thickness graft
- Lower risk of intraocular (inside the eye) problems such as serious infection or bleeding
- Lower risk of graft rejection
- The corneal wound after DALK is stronger than that after a full-thickness graft (PK). This means that stitches can be removed sooner.

Possible disadvantages of DALK over full-thickness graft
DALK recipients have a slightly lower chance of achieving 6/6 vision (excellent vision) than recipients of full-thickness grafts.

About the operation
The operation
The operation is performed under general or local anaesthetic, and takes about one hour. A central partial thickness 8mm button of your cornea is removed and a similar-sized button of the donor cornea is stitched in with tiny stitches (see front cover). These cannot be felt or seen. The abnormal cornea, which is removed, is sent to our pathology laboratory for examination under a microscope.

After the operation
You will generally be examined by the surgical team after the surgery and can usually go home the same day. You will be seen again within one week in the outpatient clinic and regularly thereafter (approximately six visits in the first year). We generally recommend that you take two weeks off work, please discuss your specific circumstances with your doctor. You will need to use anti-rejection eye drops for at least six months and in some cases indefinitely. Individual stitches may be removed from three months after the operation, but complete stitch removal is not performed until at least one year after the procedure.

What if my transplant fails?
A failed transplant can be replaced in a procedure known as a regraft, but the risk of subsequent rejection and failure increases each time for second and subsequent regrafts.

Consenting for information sharing
We are required to share your information with the NHS Blood and Transplant Special Health Authority (NHSBT), who supply donor corneas, to comply with the law and to ensure high quality transplant material. However, to share this information, we require your consent. If
you do not give consent for your information to be shared with or held by the NHSBT, this may affect availability of donor tissue for the transplant or create problems with contacting you should any problems be identified later on with the tissue you received. For more details please read the leaflet “NHS Blood and Transplant: Giving consent for use of your information,” which can be found here: https://www.organdonation.nhs.uk/newsroom/publications/living_donor_consent.pdf

**Corneal transplant rejection**

Rejection needs urgent treatment, as this can lead to failure of the transplant and loss of vision.

**Symptoms of rejection are:**

- Red eye
- Sensitivity to light
- Visual loss
- Pain

If you experience any of these symptoms, you should come immediately to our 24-hour emergency department. If in doubt, call 020 7253 3411 and ask to speak with the doctor on duty in the emergency department.
Patient advice and liaison service (PALS)
Phone: 020 7566 2324 or 020 7566 2325
Email: pals@moorfields.nhs.uk
Moorfields’ PALS team provides confidential advice and support to help you sort out any concerns you may have about the care we provide, guiding you through the different services available at Moorfields. The PALS team can also advise you on how to make a complaint.

Your right to treatment within 18 weeks
Under the NHS constitution, all patients have the right to start their consultant-led treatment within 18 weeks of being referred by their GP. Moorfields is committed to fulfilling this right, but if you feel that we have failed to do so, please contact our patient advice and liaison service (PALS) who will be able to advise you further – see above for contact details. For more information about your rights under the NHS constitution, please visit www.nhs.uk/choicewithinthenhs.
