This leaflet aims to provide specialist information and guidance for patients before and after having their eye removed (enucleation/ evisceration), or who are undergoing secondary ball implant surgery, dermis fat graft surgery or any other revision of socket surgery. If you have any further questions after reading this leaflet, please contact the ocular prosthetics team via the details below.

Visit: Ocular prosthetics department, first floor, Moorfields City Road.  
Call: 020 7566 2478  
Email: moorfields.ocularprosthetics@nhs.net

I am struggling to come to terms with my condition. Who can I speak to?  
First of all, please know it is completely understandable and normal to feel like this after having your eye removed, especially if you had some sight in your eye before the operation. Your emotions may fluctuate as you realise you are losing, or have lost, a part of you. You may also feel grief, sadness, bitterness and anger, and initially find it difficult to come to terms with having only one eye. Some patients have the sensation that the eye is still there or have temporary visual hallucinations or flashing lights. This is all quite normal and will improve over time.

If you would like to talk to someone about coping after having an enucleation you can contact one of several helpful organisations (see pages 7-8 of this leaflet). We have also produced a series of videos on ‘coping with eye loss’ which you might find helpful. Please visit the Moorfields YouTube channel: www.youtube.com/user/moorfieldseye

About Moorfields ocular prosthetics department  
Moorfields ocular prosthetics department is the largest of its type in the UK. The team here fits and manufactures a complete range of custom-made ocular prostheses, (artificial eyes) as well as cosmetic shells (see figure 1 below). Our custom-made prostheses are made
from high quality cross-linked acrylic and are individually moulded to your socket. They are manufactured by the ocularist in the department at Moorfields City Road and hand painted in front of you. This ensures they are a near perfect colour match to your natural eye. Due to the nature of our work, prosthetics can only be provided at City Road.

How soon can I get my custom made prosthesis after surgery?
Due to the specialist nature of this work, getting your custom made prosthesis or cosmetic shell will take some time. The timing of your initial appointments with us is done in the way to allow the socket to heal and settle from the surgery. During surgery, you will be fitted with a conformer (clear shell placed in your socket during surgery) and fit a temporary prosthesis from our stock of pre-made artificial eyes. We will teach you how to insert and remove this prosthesis (see ‘inserting and removing your prosthesis or cosmetic shell’ section opposite for more details). This appointment will last approximately one hour. After this appointment we will book your next appointment for approximately two months later.

- Six weeks post-op
  At this appointment we will remove your conformer (clear shell placed in your socket during surgery) and fit a temporary prosthesis from our stock of pre-made artificial eyes. We will teach you how to insert and remove this prosthesis (see ‘inserting and removing your prosthesis or cosmetic shell’ section opposite for more details). This appointment will last approximately one hour. After this appointment we will book your next appointment for approximately two months later.

- Three and a half months post-op
  At your second appointment we will begin the process of making your custom made eye. We will determine the shape of your socket by taking an impression
and forming a wax shape from it. An iris is then painted to match your natural eye (see figure 2 below); this is embedded into the new shape. This appointment will last approximately two hours. Please note that this prosthesis will need to be processed into acrylic plastic, which will take approximately six to eight weeks. You will leave this appointment today still wearing your temporary prosthesis.

Figure 2: An ocularist at work

- **Five to six months post-op.** You will return to the ocular prosthetics department to collect your finished custom made prosthesis. Occasionally, the prosthesis may need adjustment to get the best possible fit or appearance, and as a result of this we may need to keep the prosthesis for a short time longer.

Will I need any further appointments with the ocular prosthetics department?

Yes. You will need to phone us (see contact details on first page) to book a ‘review & polish’ appointment for approximately 12-18 months later. This is because your prosthesis is made of a form of acrylic which needs to be polished from time to time to keep it comfortable long term. The polishing removes any marks or protein build up from the surface that can cause discomfort.

**Instructions for inserting and removing your prosthesis or cosmetic shell**

You will be shown how to insert and remove your prosthesis by your ocularist. These instructions are to remind you how to do this correctly. Figures 3 and 4 show the anatomy of the normal eye and a diagram of the implant in the socket and the prosthesis before insertion.

Figure 3
Fitting the prosthesis

The instructions are the same for whichever type of prosthesis you have had fitted. They are usually marked or shaped to help you tell which way around the prosthesis should be fitted:

- Conformer shells are pear-shaped and are fitted with the narrow end pointing towards the nose.
- Temporary artificial eyes normally have a black spot on the top edge.
- Artificial eyes and cosmetic shells normally have four coloured spots along the top edge (see figure 5 below).

After washing your hands, wash your prosthesis with warm running water and liquid soap, washing up liquid or simple soap and rinse thoroughly.

Holding the prosthesis between thumb and second finger of your dominant hand, rest your index finger on the centre of the prosthesis, making sure that the dots are visible. Put a second finger of your other hand on the centre of the eyelash and lift the upper lid.

Look down and insert the dotted edge of the shell under the lid. When the prosthesis is half way in, let go of the top lid, but still hold the prosthesis in position with the finger of your dominant hand.

Look up and gently pull down the lower lid with the other hand. Push the prosthesis up slightly until the prosthesis slips over the lower lid. The prosthesis is now in place. If it feels uncomfortable, look in the mirror and ensure that the position is correct. If it is rotated gently put a finger onto the surface of the prosthesis and rotate it by stroking the front. Figure 6 below demonstrates this.

Removing the prosthesis
There are three main ways to remove your prosthesis. Your ocularist will demonstrate the best way for you.

Using a silicone extractor
After washing your hands, remove the extractor from its container and wash and moisten the cup end. Gently push the cup onto the centre of your prosthesis. Check that it has stuck to the surface. If it has not, moisten it again and ensure that it is placed centrally on the prosthesis. Gently raise the lower edge of the prosthesis from behind the lower lid, pull the extractor forward and with a downwards motion (see figure 7 below). The prosthesis should come out attached to the extractor. Separate the extractor and the prosthesis, wash them both and keep them both safe in their respective containers.

Removing an artificial eye
First ensure you wash your hands. Do not look in a mirror. Look up. Gently push the lower lid down with your index finger until the lower ledge of the prosthesis emerges. Then look down. The prosthesis will slide down over your index finger – make sure you catch it with your spare hand. Wash both your hands and the prosthesis, and either re-insert or place in its container. Figure 8 below demonstrates this method.

Removing a cosmetic shell
First ensure you wash your hands. Gently place the side of your index finger along the upper eyelash. Do not look in the mirror. Look down. Push your upper lid up until it reaches the top edge of the shell. Now gently pull the eyelash towards your ear so it tightens. The shell will lift off the eye – make sure that you catch it with your spare hand. Wash both your hands and the prosthesis, and either re-insert it or dry it and replace it in its box. Figure 9 on the following page demonstrates this method.
What will happen if I require a facial prosthesis?
Facial prostheses are supplied normally three to four months following exenteration (the removal of the entire contents of the eye socket, including eyeball, muscles, fat and tissues) to allow tissue to settle. These are constructed of acrylic and/or silicone rubber. They are positioned and held in place by adhesives or are attached to your glasses. We can also provide prostheses that are attached to orbital bone retained implants for better adhesion. These are all manufactured on site. The orbital area is moulded and the new face area sculpted in clay and wax to provide a symmetrical look with the other orbital area.

Is the process the same for adults and children?
The process can be different for children if they are born with either anophthalmia (no eye/eyes) or microphthalmia (small eyes). This is because the eye socket needs to be consistently expanded to ensure natural growth of the orbital area. This is achieved by various methods over a number of weeks and months (depending on the child), until it has been decided by either the paediatric consultant or the ocularist that a cosmetic prosthesis can be provided. At this point, a moulded prosthesis will be manufactured. The moulding process will need repeating frequently to match the growth and encourage continued socket expansion. Please be assured that our ocularists and surgical team have a great deal of experience and expertise in these more difficult cases.

Support available at Moorfields:
- Ocular oncology nurse specialists

Our ocular oncology nurse specialists, based at Moorfields Eye Hospital at City Road, are available to give you specialist advice. They are located in the ocular oncology clinics and are available on Tuesday afternoons, and all day on Thursdays and Fridays.

Our ocular oncology nurse specialists

- Sinead Hanrahan  
  Phone: 07711765371  
  Email: sinead.hanrahan@nhs.net

- Nana Gyasi-Twum  
  Phone: 07885447138  
  Email: n.gyasi-twum@nhs.net
- **Nurse counsellors**  
  If you are finding it difficult to come to terms with your diagnosis and the treatment you require, you may like to talk to one of the nurse counsellors based at City Road. Counselling provides an opportunity to talk things through, allowing you the time to explore your thoughts and feelings and to make sense of the way you feel.

  **Our nurse counsellors**

  - **Jasmine Thombs**  
    (available Monday–Tuesday)

  - **Hannah Treston-Davies**  
    (available Wednesday–Friday)

  **Phone:** 020 7566 2385  
  **Email:** jasmine.thombs1@nhs.net or h.treston-davies@nhs.net  
  **Write to:** Ophthalmic nurse counsellors, Moorfields Eye Hospital, City Road, London EC1V 2PD

  Alternatively, you can ask your ocular oncology nurse specialist to refer you to one of the counsellors.

  **Friends ocular prosthetics buddy service**  
  An initiative of the Friends of Moorfields, the buddy service puts ocular prosthetic patients going through what can be a very traumatic experience in contact with another Moorfields ocular prosthetic patient who has been through a similar procedure/experience and is trained by our nurse counsellors to provide practical peer support. For more information, please contact:

  **Health information hub.**  
  The health information hub, managed by the Friends of Moorfields is situated near the main entrance of Moorfields at City Road. Patients, their carers and families are welcome to drop by the hub and have an informal chat with our health hub support officer who can provide more information about services available at and beyond Moorfields.

  **Support available outside Moorfields:**
  **Macmillan Cancer Support**  
  **Website:** www.macmillan.org.uk  
  Macmillan provide practical, medical and financial support and advice for people going through cancer.

  **Changing Faces**  
  **Website:** www.changingfaces.org.uk  
  A charity for people and their families who are living with conditions, marks or scars that affect their appearance.

  **Maggies Cancer Support Service**  
  **St Bartholomew’s Hospital London**  
  **Website:** www.maggiescentres.org

  **Macs (Microphthalmia, Anophthalmia & Coloboma Support)**  
  **Website:** www.macs.org.uk
Chect (Childhood Eye Cancer Trust)

Saturday, 9am-5pm
Information and advice on eye conditions and treatments from experienced ophthalmic-trained nurses.

Patient advice and liaison service (PALS)
Phone: 020 7566 2324/ 020 7566 2325
Email: moorfields.pals@nhs.net
Moorfields’ PALS team provides confidential advice and support to help you with any concerns you may have about the care we provide, guiding you through the different services available at Moorfields. The PALS team can also advise you on how to make a complaint.

Your right to treatment within 18 weeks
Under the NHS constitution, all patients have the right to begin consultant-led treatment within 18 weeks of being referred by their GP. Moorfields is committed to fulfilling this right, but if you feel that we have failed to do so, please contact our patient advice and liaison service (PALS) who will be able to advise you further (see above). For more information about your rights under the NHS constitution, visit www.nhs.uk/choiceinthenhs
